

## **Parent's Guide to Using Century Tech for Homework**

This guide will help parents understand what Century Tech is, how children can log in, complete homework, and make the most of the platform.

### **What is Century Tech?**

CENTURY is an online learning and homework platform that uses AI (artificial intelligence) and learning science to personalise students' learning. It provides:

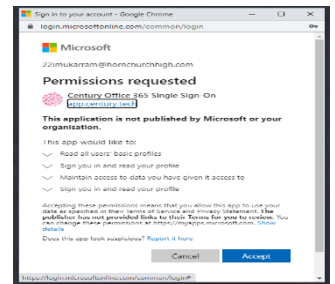

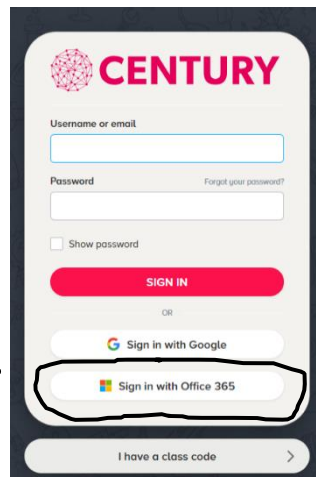

- Interactive revision lessons broken into small chunks
- Teacher-assigned courses and homework
- It adapts to each student: identifying strengths and gaps, and recommending “nuggets” (small learning tasks) targeted to their level

### **How to Log In**

1. Go to add webpage: <https://app.century.tech/login/>
2. Sign in with Office 365
3. Click accept
4. Once logged in, your child will see the courses assigned by their teacher on the homepage.

If login doesn't work:

- Ensure they are using the correct email address linked to their school account.

### **How to Start and Complete Homework**

1. Go to 'My assignments' tab where upcoming tasks and past ones are listed.
2. Click on an assignment name to see its details: due date, instructions, how much of it is done. Century Tech
3. Start the Assignment / Nugget by clicking on it to open it
4. Work on the Nugget. Each nugget is a small learning activity, often with slides, video, or mini-lessons to teach or remind before asking questions.
5. If a question is answered wrong, feedback is often given immediately, and there may be an option to reveal correct answers.
6. Once complete students can submit their assignments.

### **Tips for Parents**

- Encourage your child to spread out homework and revision
- Sit with your child occasionally to see how Seneca works—it is very visual and interactive.
- Remind them to retry incorrect questions to reinforce learning.
- Check progress reports by asking your child to show you their assignment scores.
